

Locate Underground Utilities

Clay Rural Water is a member of South Dakota One Call, a communication link among utilities, contractors and private individuals who work with or around underground lines or pipes. If you plan to dig a hole or trench more than one foot deep on your property, you must phone South Dakota One Call toll free at 1-800-781-7474 at least 48 hours before you plan to excavate. All utilities that participate in the One Call program have their facilities registered with the One Call Center. When you call in and provide your location information, all registered utilities will be automatically notified of your planned excavation and will come to your property and mark their facilities.

You cannot call the utilities directly as they must have a One Call ticket in order to locate their facilities.

Use of the One Call system is required by South Dakota Codified Law.
